

WIRELESS GATE STARTS

Our gate start system provides automatic wireless start signal to a photo finish or timing system.

This system is affordable on its own, but could save costly repairs to cables needed by other systems. Connects to switches already mounted on gates, or we can provide the switches.

Operates on the 12v supply on the gate, or use the optional power of a small solar pannel and battery.

Each unit provides a two radio, dual frequency start signal.

Available with optional MTP Indication

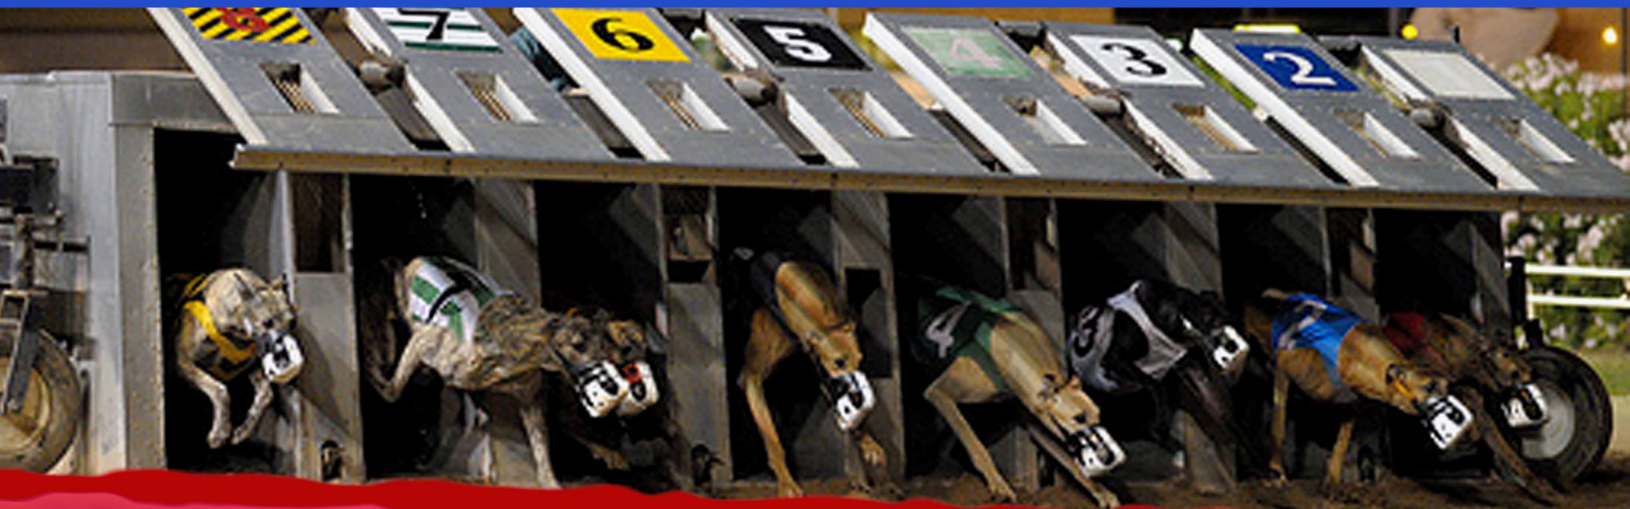

Purchase or lease, we make it simple.
