RE: Revolutionary Indoor Air Purification System

PEMBROKE PINES, Fla. -- A revolutionary Indoor Air Purification System that will take the smoke out of your racetrack, racino or gaming facility and save you money has been developed and is currently being introduced by Racing Systems International, Inc. through its affiliation with Molecular Technologies, Inc.

“We are extremely excited to be able to add Molecular Technologies’ Air Purification System to our long list of products and services,” said Mark Bufe, owner of Racing Systems International, a full-service provider of systems and solutions for the pari-mutuel, gaming and sports industries.

Molecular Technologies, a green technology company based out of Las Vegas, Nevada, has developed a unique liquid formula when emitted into the air as a molecular mist, binds to the byproducts of smoking and other air contaminants and breaks them apart, thus removing the particles from the air.

After 24 hours, the system will have completely changed the atmosphere of the facility. Within 30 days, the system will have removed most of the residual toxins that can affix to surfaces causing lingering odors such as the smell of smoke even when no one is smoking. There are no negative effects when furniture, carpeting, electronics or other items come into contact with the MTI formula.

“Molecular Technologies is NOT a cover-up scent company,” explained Bufe. “Through the implementation of this technological innovation, our clients are able to eliminate all other secondhand smoke control systems, resulting in significant savings. What Molecular Technologies has done, is create an atmosphere where both smokers and non-smokers can positively co-exist within an indoor gaming establishment by creating a smoke-free environment naturally, while reducing energy and maintenance costs,” added Mark.

For more detailed information about Molecular Technologies, please visit [www.racingsystemsinternational.com/molecular](http://www.racingsystemsinternational.com/molecular) or to request an HVAC Survey to see the potential savings for your facility, please contact Mr. Mark Bufe directly at 954-254-8335 or email [mbufe@racingsystemsinternational.com](mailto:mbufe@racingsystemsinternational.com).
